                    Platinum Partner

Junior C# / .Net Software Developer
Location: US, Remote (ideally in Greensboro, NC)

We're looking for enthusiastic developers, who enjoy learning and applying new technologies to solve complex business problems. You will join a small team of bright, talented developers and designers working hard to create phenomenal user experiences for our customers.

Building and maintaining client relationships is vital – you'll need to demonstrate that you can gain the respect of clients through your product and technical knowledge, and that you can successfully interpret clients' needs.

Epicor enterprise resource planning (ERP), point of sale (POS), supply chain management (SCM), and human capital management (HCM) solutions enable companies to drive increased efficiency and improve profitability.

If you're looking for a challenging yet rewarding role with an innovative, growing company and an outstanding global team, it's time to talk to Epicor.

Role Summary/Purpose:

More specifically the developer will assist customers and senior team members in gathering requirements, make recommendations toward the development of new code or reuse of existing code or modules.

Qualifications/Requirements:

Primary Responsibilities:

Design, develop and maintain the operation of SaaS applications, with a specific emphasis on usability, performance and scalability
-Develop applications by studying existing technology architecture
-Program objects, events, functions, error trapping and data verification
-Adhere and contribute to development policies, procedures and standards
-Review current systems and present ideas for system improvements
-Work closely with analysts, designers and staff
-Produce detailed specifications
-Test the product in controlled, real situations before going live
-Perform system maintenance on an ongoing basis

Qualifications and Preferred Skills
Bachelor's degree in Computer Science or Information Systems.
Microsoft Visual Studio, Microsoft SQL Server, Team Foundation Server

Experience using object oriented coding practices, test driven development, and system interfaces

Required Skills for Junior C# Developer Job:

- C#
- MVC
- ASP.NET

Overview

Encompass Solutions has a global technical services team, with experienced resources based out of the United States, Asia Pacific, and Europe. Technical Services can provide both local support, wherever our customers may be, as well as round the clock support when required by any project that has an aggressive timeline.

All technical team members have over a decades experience working with Enterprise systems, and also have significant consulting experience with products from multiple vendors with a heavy emphasis on solutions for Manufacturing. All resources have very strong technical backgrounds, and are well versed with modern software design, as well as the implementation process. The Encompass Solutions Technical Services team works with our clients to build any necessary system enhancements required to address any gaps identified between any solutions standard functions and the unique requirements of a particular end customers specific vertical market. The team is also proficient with industry standard reporting and bar-coding tools such as Crystal and Bartender, as well as mobility and web solutions.

The group has been working with the Epicor ERP product since 2006, and has experience with versions 8 and up, as well as related products such as Epicor Service Connect, Customer Connect, Vendor Connect, Tax Connect, Credit Card Processing, EPM and EDI.

All resources are Epicor certified, and thus have a proven understanding of the ICE Framework. This includes developing Crystal Reports, the use of BAQ queries to create BAQ reports, Dashboards and Trackers, and building custom solutions without impacting source code in an Epicor environment. In addition, they are accomplished .Net developers with a good understanding of how to use the Epicor business objects to implement customizations, conduct application automation and integration, and build stand-alone applications using the SDK tools as required.
